The gene is located at chromosomal position 3p24.2-p21.3. The kinase polypeptides are useful for diagnosing a disease or disorder selected from cancers (e.g. cancers of tissues and cancers of hematopoletic origin), immune-related diseases and disorders, cardiovascular disease, brain or neuronal-associated diseases (e.g. Alzheimer's disease, parkinson's disease, multiple sclerosis), cometabolic disorders, peripheral nervous system diseases, amyotrophic lateral sclerosis, viral infections, infections caused by prions, infections caused by bacteria, infections caused by fungi, ocular diseases, migraines, pain, sexual dysfunction, mood disorders, attention disorders, cognition disorders, hypotension, hypertension, psychotic disorders, cognition disorders, hypotension, hypertension, kinase inhibitors are useful for treating diseases and disorders.

                                                                                                                                                                                                                                                                                                                                                         The sequence represents the amino acid sequence of a novel human kinax protein. The nucleic acid sequence can be used to screen libraries, isolate clones and prepare cloning and sequencing templates and as hybridisation probes for screening libraries, and as therapeutics such as antisense-therapy and gene-therapy. Probes derived from the DNA or polypeptide sequences can be used in the identification, selection and validation of novel molecular targets for drug discovery.

The specificat also describes kinases 2504 and 14760. The kinase polypeptides and polypucheotides are used to treat cellular proliferative or differentiative disorders, neural disorders, immune disorders and skel muscle disorders. They may also be used for controlling disorders associated with bone metabolism, cardiovascular disorders, viral diseases, pain or metabolic disorders, blood vessel disorders, and hepatic or liver disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Claim
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      disorders of

                                     This sequence is a protein kinase similar to the HRR25 protein of CC Saccharomyces cerevisiae which is described in AAR56519. CC Host cells stably transformed with the protein kinase encoding DNA CC may be used for the expression of the protein kinase such that the CC cells may then be used as immunogen for the production of antibodies. CC The host cells may also be used for the large scale production of the CC protein kinase, the expressed protein being either isolated from the CC protein kinase, the expressed protein being either isolated from the CC cells surface or from the culture medium. Recombinant HRR25 like CC proteins display a number of properties which are unique among the CC entaryotic protein kinases e.g. the HRR25 protein possesses both CC protein-tyrosine kinases and protein-serine/threonine kinase CC eactivities. Also, HRR25 operates to promote repair of DNA strand CC breaks at a specific nucleotide sequence and is the only protein CC kinase known to have such recombination/repair promoting activity. CC Recombinant HRR25-like proteins and host cells expressing them are CC useful in screening methods designed to examine the effects of CC various compositions on DNA break repair and protein kinase cativities of the protein. The HRR25-like protein sare casein

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Ş
This human casein-kinase-I (CKI-gamma-1Hu) protein which is a homolog of a DNA recombination and repair protein HRR25 (NO and/or radiation repair) possesses both protein-tyrosine-kinase and protein serine/tyrosine-kinase activities. HRR25 operates to promote repair of DNA strand breaks at a specific nucleotide sequence and is the only protein-kinase known to have such recombination/repair
                                                                                                                                                                                New monoclonal antibodies against human casein Kinase class enzymes - useful for purifon, and determn of these enzymes modulate their receptor -ligand binding, also new hybridomas

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         CC This sequence is a protein kinase similar to the HRR25 protein of CC Saccharomyces cerevisiae which is described in AR56519. CC Host cells stably transformed with the protein kinase encoding DNA CC may be used for the expression of the protein kinase such that the CC expressed protein is "displayed" on the host cell surface. The CC cells may then be used as immunogen for the production of antibodies. CT when the cells may also be used for the large scale production of the CC protein kinase, the expressed protein being either isolated from the CC cell surface or from the culture medium. Recombinant HRR25 like CC proteins display a number of properties which are unique among the CC eukaryotic protein kinases e.g. the HRR25 protein possesses both CC protein tyrosine kinases e.g. the HRR25 protein possesses both CC protein tyrosine kinases and protein-serine/threonine kinase collectivities. Also, HRR25 operates to promote repair of DNA strand CC kinase known to have such recombination/repair promoting activity. CC Recombinant HRR25-like proteins and host cells expressing them are CC useful in screening methods designed to examine the effects of various compositions on DNA break repair and protein kinase activities of the protein. The HRR25-like proteins are casein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Query Match

HRR25 operates to promote repair of DNA strand breaks at a specific nucleotide sequence and is the only protein-kinase known to have such recombination/repair

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               sequences (ABL01840

                                                                                                                                                                                                                                                                                                          The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The inventiuseful in developmental biology and in elucidating cell signalling a cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL01840-ABL16175) and the encoded proteins (ABD1872072).
                                                                                                                                                                                                                                                                             The sequence data for this patent did not form part of the specification, but was obtained in electronic format direct at ftp.wipo.int/pub/published_pct_sequences.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         for modulating a Wnt signal transduction pathway and for treating Wnt signal transduction pathway-mediated disorders, CKI-mediated hyperproliferative disorders and hyperproliferative disorders such as mammary cancer, mammary hyperplasia, melanoma or colon cancer, by administering a composition comprising a CKI inhibitor or CKI variant to the mammal. The composition is also useful for screening compounds that modulate the activity of a Wnt signal pathway. Neoplasias such as cervical cancer, colorectal adenocarcinomas, Wilm's tumour, and the control of the colorectal adenocarcinomas, Wilm's tumour, and the colorectal adenocarcinomas with the colorectal adenocarcinom
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              retinoblastoma, sarcomas, myosarcomas, lung carcinomas, leukaemias, such as chronic myelogenous leukaemia, promyelocytic leukaemia, monocytic leukaemia, and myeloid leukaemia, and lymphomas, such as histiocytic lymphoma can be treated with the composition. Proliferative disorders that are treated with the composition include disorders such as anhydric hereditary ectodermal dysplasia, congenital alveolar dysplasia, epithelial dysplasia of the cervix, fibrous dysplasia of bone, and mammary dysplasia. Hyperplasias, for example, endometrial, adrenal, breast, prostate, or thyroid hyperplasias or pseudoepitheliomatous hyperplasia of the skin are treated with the CKI containing composition.
                                                                            Arabidopsis thaliana
                                                                                                                                                                                 Protein identification; signal transduction pathway; metabolic

This sequence is a protein kinase similar to the HRR25 protein of Saccharomyces cerevisiae which is described in ARR56519. Host cells stably transformed with the protein kinase encoding DNA may be used for the expression of the protein kinase such that the expressed protein is "displayed" on the host cell surface. The cells may then be used as immunogen for the production of antibodies. The host cells may also be used for the large scale production of the protein kinase, the expressed protein being either isolated from the cell surface or from the culture medium. Recombinant HRR25 like cell surface or from the culture medium. Recombinant HRR25 like enwaryotic protein kinases e.g. the HRR25 protein possesses both cells arrives kinase and protein serine/threonine kinase are contivities. Also, HRR25 operates to promote repair of DNA strand breaks at a specific nucleotide sequence and is the only protein kinase known to have such recombination/repair promoting activity. Recombinant HRR25-like proteins and host cells expressing them are useful in screening methods designed to examine the effects of various compositions on DNA break repair and protein kinase
                                                                                                                                                                                                                                                                                                                                                                                                                                     Query Match 41.6

                                                                                                                                                                                                                                             This human casein-kinase-I (CKI-delta-Hu) protein which is a homolog of a DNA recombination and repair protein HRR25 (Ho and/or radiation repair) possesses both protein-tyrosine-kinase and protein serine/tyrosine-kinase activities. HRR25 operates to promote repair of DNA strand breaks at a specific nucleotide sequence and is the only protein-kinase known to have such recombination/repair
                                                                                                                                                                                                                                                                                                                                                                                                      New monoclonal antibodies against human casein Kinase class I enzymes - useful for purifon. and determn. of these enzymes a modulate their receptor -ligand binding, also new hybridomas
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     21-JAN-1994;

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
